# DURA-LATCH™ Anvil Covers

For Glue Lap and Attachment Die Cutting

## ■ REDUCE MACHINE DOWNTIME

Dura-Latch Anvil Covers are designed with all the features you need to keep your machine running and eliminate unnecessary downtime. The one piece construction, the T-shaped lock design, plus the highest quality urethane all mean more uptime for you.

*One-piece Dura-Latch versus competitor's two-piece covers means faster setup, plus easier removal and shape retention for reinstallation.*

## ■ MAXIMIZE ANVIL COVER LIFE

Dura-Latch Anvil Covers are made of the highest quality, most durable urethane available in the industry. Unmatched durability, combined with one-piece construction and T-shaped lock design provide maximum anvil cover life.

## ■ PRICED COMPETITIVELY

Dura-Latch Anvil Covers are among the most widely used covers in the industry. Our high volume production allows us to pass the savings along to you. Ask us today to quote your requirements and see how much you can save.

## ■ SIZE TO FIT VIRTUALLY EVERY MACHINE

Dura-Latch Anvil Covers are currently available in over 300 sizes to fit essentially every machine in the industry. We continually add new sizes to keep up with industry demands. Even uncommon or custom-sized covers can be produced to meet your special needs.

## ■ ONE-PIECE DESIGN

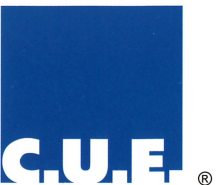

The single latch promotes quicker setup time, it fits the anvil more securely than two-piece covers, and it allows the cover to freewheel longer. Also, having only one seam means cleaner cutting.

## ■ EXCLUSIVE T-SHAPED LOCK

This design allows faster installation and removal. It will not distort from use like other designs, making reinstallation easier. During lock-up, it engages within the rails, so the lock cannot be cut off during use.

## ■ AVAILABLE FROM STOCK

C.U.E. stocks thousands of anvil covers at all times, available for immediate shipment. Let us provide you with the quality products and the service that so many others have come to rely on.
